Art Unit: 3634

The status of the claims is as follows:

Claims 4 and 9 has been cancelled; and

Claims 1-3, 5-8 and 10-20 are herein addressed below.

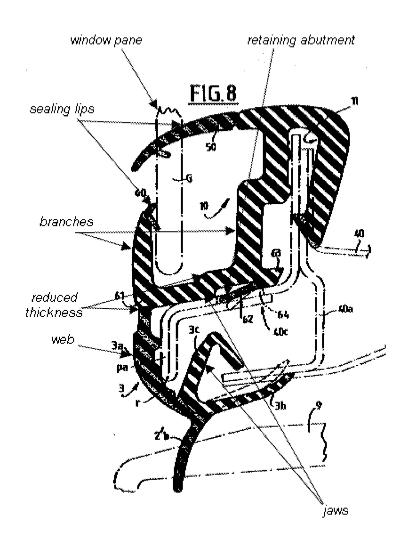

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-3, 5-8, and 10-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. patent to Gueneau et al. (5,319,883) in view of Weimar (4,542,610). Gueneau et al. (5,319,883) disclose an elastomeric/plastomeric weatherstrip (See figure 8 below) forming a slideway, a web (3a) having two jaws forming a channel, a retaining abutment (62) contacting a projection (64) from the flange (40c), and two parallel branches (see figure below) having sealing lips (see figure below) contacting a window pane (G) and having a root with reduced thickness. Gueneau et al. (5,319,883) fail to disclose a reinforcement element.

Application/Control Number: 10/629,595

Art Unit: 3634

Weimar ('610) discloses the use of a reinforcement element (18) located at any position along a weather-strip (column 5, lines 19-37). It would have been obvious to one of ordinary skill in the art at the time of the invention to provide the weather-strip of

Gueneau et al. (5,319,883) with a reinforcement element as taught by Weimar ('610) since a reinforcement element provides extra strength and rigidity to the weather-strip along portions which need strengthened.

The applicant's arguments dated 4/28/2010 have been considered but are not deemed persuasive. With respect to the art rejection, the applicant states that the wire of Weimar has a different use and not a reinforcement element per se. The Examiner respectively disagrees. The wire of Weimar ('610) clearly states (column 3, lines 13-14) "one of the purposes of the wire insert is to enable the sealing strip to be stiffened" and in column 5, lines 19-37, the wire insert can be positioned along any desired location of any portion of the weather-strip. Thus, taking the rejection and the combination of the references as a whole, one of ordinary skill in the art at the time of the invention would look to Weimar to reinforce the weather-strip of Gueneau et al.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jerry Redman whose telephone number is 571-272-6835. The examiner can normally be reached on M-F from 8 to 6.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ms. Mitchell, can be reached on 571-272-7069. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for
